CLERILYS®

## Natural whitening of the skin in 3 steps

JEAN D'ARCEL  
COSMETIQUE

Based on 3 botanical extracts which complement each other synergistically

- **Inhibit the synthesis of melanin:** The stilbene from the **white mulberry** that has similar structure with the tyrosinase inhibit the synthesis of melanin. This protects the skin from further pigmentation.
- **Breaking the melanin accumulations:** The phenylalanine from the **cucumber** reduces the penetration of the melanin through the membrane into the melanosomes and thus the accumulation of the pigments.
- **Remove the melanin dust:** The organic acids of the **hibiscus flower** act as an exfoliator. **The cell division rate is increased (by 14%)**, which accelerates the whitening effect.
