BEAUTY IS OUR PROFESSION

„black“ spots whitening complex

multibalance correction teint anti-taches / age spot corrector

Age spot corrector

A daily multi-action lightweight serum that reduces the appearance of skin “black” spots, targets skin discoloration often caused by accumulated sun exposure, hormonal shifts, and the natural aging process. This multi-active comprehensive technology exfoliates and improves skin radiance to reduce the appearance of discoloration and improves skin tone.

PRODUCT FEATURES:

- ✓ An effective whitening complex helps to brighten up localized pigment changes on the face, neck, décolleté and hands.
- ✓ Significant, visible decrease in dark spots in minutes.
- ✓ Permanently inhibits the production and depositing of new **pigments**¹.
- ✓ Leaving the complexion looking more even and radiant **again**².
- ✓ 32% visible decrease in dark spots over time.
- ✓ Addresses the appearance of future dark spots.
- ✓ 86% of subjects in a clinical trial evaluated their skin tone as appearing more uniform.
- ✓ Paraben and dye-free; non-comedogenic.

¹in vitro active ingredient evidence

²in vivo active ingredient evidence with 30 test subjects and application twice a day over 84 days

Active ingredients:

Whitening complex (based on daisy extract) • Iris root extract • Plankton extract
• root of the yellow pagoda tree • D-panthenol • Pentavitin® • shea butter • vitamin C/E • evening primrose oil

Application:

Should be used up in full within 3 months. Apply twice a day directly to cleansed pigment and age spots on the face, neck and décolleté using a twist-up pen brush. A suitable day or night cream is then applied afterwards. The serum is applied to the hands' pigment and age spots after washing them several times a day.

Retail size: 5,6 ml. dispenser, Ref. N° 1375

Dark Spots on Face

While dark spots or face spots are more common in dark-skinned people who naturally have a lot of melanin, anyone can develop it. When there is too much of melanin production, dark spots, patches, marks or blemishes may appear in different areas of your body like face, neck and arms. Traffic related pollution, along with ultraviolet radiation, can also give rise to formation of dark spots or brown spots on the face according to one study. Nitrogen oxide (NO₂) a major pollutant in the traffic related pollution has been found responsible for the formation of such dark spots, especially on the cheeks as the skin over there is delicate.
